

DRNet®/Kafka

powered by uLinga

NonStop

NTI deploys, supports and constantly enhances the Customers product suite at a time where data is the new currency of business.

Business Assessment:

NTI is quick to fulfill the requirements of today's modern NonStop customer.

Changing Industry Fabrics:

NTI understood that the fabric that binds an enterprise is increasingly dependent upon industry-standard, open-source, streaming platforms such as Kafka.

Partnerships Deliver:

History between the companies further highlights the advantages of bringing the best of breed products together to work in harmony.

Together, NTI and Infracore can now deliver the best of both worlds-tight integration between the core capabilities of DRNet® on HPE NonStop systems and the world of Kafka. This is important because:

Connectivity:

NonStop applications are no longer islands; they are now integral participant in the enterprise. Replicate and stream data simultaneously and seamlessly NonStop to NonStop and NonStop to Kafka

Useful and accessible:

Data only becomes intelligent when it becomes useful; NonStop is the source of freshest (real time) and safest (secured) data accessible by all in the enterprise. Sought after for incorporation into data analytics, aggregation, and microservices

Improved TCO:

A partnership minimizing risk, leveraging industry standard, delivering immediate results in the most cost-effective way. Easy to integrate into existing DRNet®/Unified configurations without impacting environment.

NonStop customers helped to create a greater visibility within the enterprise

Zero Downtime Deployment:

Transaction processing belongs on NonStop – data available to all. Immediately. Easily consumed. Streaming to Kafka can be activated online without any downtime or data loss.

All-encompassing Product:

Replicate metadata (e.g. modification timestamps, update type, application process name, system name, volume name, partition name, etc.) for enriched data delivery.

Each Vendor Delivering Value:

Powerful Transformations are done by uLinga, so the NonStop customer only needs to add a handful of lines to an existing DRNet®/Unified configuration to begin replicating to uLinga.

We have been engaged with NonStop customers with our earlier product offering as part of DRNet®/Unified for Business Integration but quickly realized that we needed to do much more to fully address the opportunities presented to NTI. Knowing as we do the skillsets of the Infracore team and the speed with which Infracore delivers quality solutions, it needed little time on the part of NTI to realize the value that could be unlocked by working together. Infracore has a proven track record and a consistent presence as thought leaders who are technology savvy.

-- Tim Dunne, NTI's Global Director of Worldwide Sales
